

FT005 Red Rust on Aluminum

Innovation in Decorative Laminates

FusionTech™

A proprietary infused color and coating process

Aluminum • FRP • Glass • Ceramic • Wood • Fabric

FusionTech-Glass

Glass can be imaged for backsplashes, tabletops, doors, partitions and other applications. Glass is usually supplied by the customer and can be tempered or annealed. Beautiful solid color or translucent glass can be created with our FusionTech infused color process and translucent glass can be backlit. Glass can also be imaged on the back (or on the front if you prefer) with either your artwork or artwork from our image library. The FusionTech process is highly stable for both interior and many exterior applications

Bar Top: FusionTech on Glass

Backsplash and Countertop: FusionTech on Glass

FusionTech-Ceramic

Ceramic Tile can be infused with your images or images from our library. This program allows you to utilize the many ceramics commonly available. When needed, tiles can be sequentially numbered on the back to ensure easy installation.

Floor: FusionTech on Ceramic

FusionTech-Wood

The FusionTech process can also be applied to wood, such as wood flooring planks, MDF and hardboard. Imaging allows the beauty of the wood to come through or if preferred photo-realistic images can be created.

Floor: FusionTech on Wood

FusionTech-FRP

FRP panels can either be textured or smooth and are available in a variety of thicknesses and sizes. Images are added using our FusionTech infused color and coating process and have similar physical properties as standard FRP. This product is great for walls, water environments, food preparation areas, bathrooms and more. Our library of images includes some of our most popular MirroFlex patina finishes, which can utilize our matching trim strips. If you are tired of the traditional white or beige FRP, this unlimited custom program is for you!

Wall: FusionTech on Smooth FRP

Ceiling: FusionTech on Smooth FRP

FusionTech-Fabric

Certain fabrics can accept our infused color process creating tapestries and other fabric applications. Please inquire.

Tapestry: FusionTech on Fabric

FusionTech-Aluminum

Aluminum sheets can be satin, gloss or metal flake and will keep their aluminum appearance. The natural beauty of aluminum is still visible by using a semi-translucent ink system.

Aluminum is also available with a 4-color photo-realistic process and can have a satin, gloss or ultra gloss finish. This process is used when trying to reproduce artwork and when the clarity of the image is of the utmost importance.

Sheets are coated with a highly scratch resistant, UV stable proprietary coating and then the images are added using the FusionTech infused color process.

A Semi-Custom line is available from our library of stylish designs.

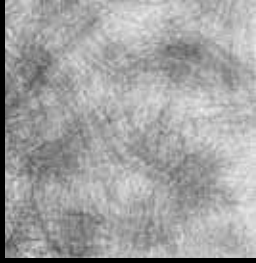

Our custom program takes customer supplied artwork and turns it into a beautiful and durable product.

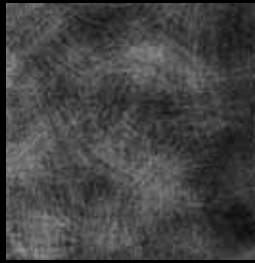

Wall: FT004 Burnished Silver on Aluminum

Aluminum Stock Program

Our stock line of designs is available on 4' x 8' aluminum.
 Most designs are shown here, but check our website for the most up-to-date stock offering.
 Request physical samples as printed images may not be exact.

Technical Information:

- Aluminum and FRP are in stock as 4' x 8' sheets. Other sizes including 4' x 10' are available. Maximum sheet size is approximately 5' x 10'.
- Aluminum sheets can be satin, gloss or metal flake and will keep their aluminum appearance. Aluminum is also available with a 4-color photo-realistic process and can have a satin, gloss or ultra gloss finish.
- Many of our products are shipped with clear protective film for ease of handling.
- UV stability is high, but varies with different substrates.
- Abrasion, Scratch and Chemical Resistant properties. Data available on request.
- Graffiti proof and Biocide coatings available.
- Fabrication is usually the same as for the substrate to which FusionTech is applied.
- Made in the USA under ISO Certification.
- Artwork submitted by customer must be in a format specified by our Art Requirements Document. Go to www.advtechnology.com/fusiontech.

Samples available on request.
 Please call Customer Service for information specific to your project.
